

## PMS AND RMS TO CENTRAL RESERVATION SYSTEM CONNECTIVITY

**iINTERFACE** enables connectivity between the hotel's Property Management System (PMS) and/or Revenue Management System (RMS) and the Preferred Hotel Group Central Reservation System (CRS). The PMS interface supports the growing needs of hotels for single image inventory and provides data transfer of rates, availability, and inventory from PMS to CRS and reservations to PMS (and with enhanced two-way from PMS to CRS as well), a key element of Total Branded Connectivity. The RMS interface ensures effective implementation of your revenue management strategy across all distribution channels.

### **iINTERFACE FEATURES**

#### PMS

- One-way, two-way, and enhanced two-way interfaces are available
- See reverse side for listing of the most common Property Management Systems.

#### RMS

- Standard revenue management controls such as rate hurdles and best available rate implemented automatically
- Interfaces available to *IDeaS*, *EasyRMS*, *Active Metrics*, and *Scignus*

### **iINTERFACE ADVANTAGES**

- Reservation transactions downloaded directly into the hotel's PMS maximizes efficiency and frees up personnel for more strategic activities
- Interfaces allow for affordable management of reservation delivery and rate updates
- Automatic downloads increase data accuracy and integrity
- Up-to-the-minute inventory provides for revenue maximization
